

**Crop Protection Sprayer Product Update:
BestWay Unveils New V-Ride Variable Ride Boom Suspension**

Sep. 24, 2008

Source: Bestway news release

Bestway Inc. a leading manufacturer and marketer of agricultural pull type sprayers, recently unveiled V-RIDE, an exclusive variable ride boom suspension system for the new Field-Pro IV sprayer line.

V-RIDE enables the operator to tailor the spray boom ride to their specific field conditions ... a softer setting for challenging no-till conditions, a firmer ride for smoother fields. V-RIDE effectively isolates trailer movement from the boom, resulting in significant performance enhancements which include; increased field speeds of 2-5 mph resulting in up to 25% increased productivity, reduced fuel costs and improved spray pattern control for optimized application accuracy.

Adjustment of the V-RIDE system is accomplished simply by turning a knob on the suspension control valve located on the sprayer, to "dial in" the preferred boom ride.

The V-RIDE system is especially tuned to work in conjunction with Bestway's FiberWorks Boom with outer wings constructed of a space age composite material that is a combination of fiberglass and a thermosetting polyester resin.

Bestway's FiberWorks boom components are one-third the weight of steel with three times the impact resistance. An exclusive dual break away system not only provides protection from damage but incorporates fore to aft spring cushioning of the wings preventing boom stress from rapid starts, stops or turns.
