

**Machinery New Product Release:
Kuhn Launches New Rotary Tender**

Kuhn North America, Inc., of Brodhead, Wis., introduces the new GF 7802 T, six-rotor, trailed rotary tedder with a working width of 25' 7". This new tedder is designed for increased transportability to meet the needs of custom harvesters and large-acreage hay producers.

The GF 7802 T moves from farm to field, or between fields, quickly and easily with its heavy-duty transport system. The transport wheel assembly completely

retracts hydraulically from the tractor seat, to go from work to transport position and back without manual adjustments. New sealed gearboxes help avoid regular maintenance and periodic lubrication. Large hyperballoon tires on the center rotors and superballoon tires on the outer rotors provide smooth operation over irregular ground. The GF 7802 T provides high operational capability in a package requiring significantly lower tractor horsepower than fully- or semi-mounted models.
