

**New Machinery Product:
Kuhn Introduces New Line Of Rollover Plows**

Apr. 28, 2009

Source: Kuhn news release

Kuhn North America, Inc., of Brodhead, Wis., introduces the upgraded Master 1x2 Series of fully-mounted, rollover plows. Four ranges of plows are available from 2 to 7 bottoms with working widths that range from 12" to 20". These plows are redesigned for easier adjustment and adaptation to the tractor, and offer an increased offset range to cover a wider range of tractor wheel spacings.

The Master 1x2 Series rollover design provides faster, more efficient plowing with no dead furrows and less time lost finishing headlands. The plow's high strength headstock and frame provide years of trouble-free service. The headstock and hitch points have been redesigned to accommodate today's taller tires and to increase transport heights when necessary. Marathon points and exclusive Triplex steel moldboards improve performance and provide long life. The Kuhn Master Series continues to offer the most extensive selection of plows available to meet the demands of today's farmers.

Kuhn North America is a leading innovator in the field of agricultural and industrial equipment, specializing in spreaders, mixers, hay tools and tillage tools. Kuhn and Kuhn Knight branded products are sold through farm equipment dealers throughout the United States, Canada, and many other countries.
